

Scroll one – Landing page

This is the hero page for the website. Now, what is being done over here is that, on the hero page, what I want is the bold idea of how Rubikr is the 24/7 process expert for your business, along with a subtext line on the contextual AI layer of your operations: just constantly watching, thinking, and responding in real time. There are two call-to-action buttons. In addition, on the background, there will be images which will be flowing in terms of a video.

This is essentially how it is wanted. Now, below this, on the same scroll itself, I want the statement "We have engaged with 200+ enterprises." Along with that, I need the logos to move like a horizontal ticker, moving side by side from one scroll to the other.

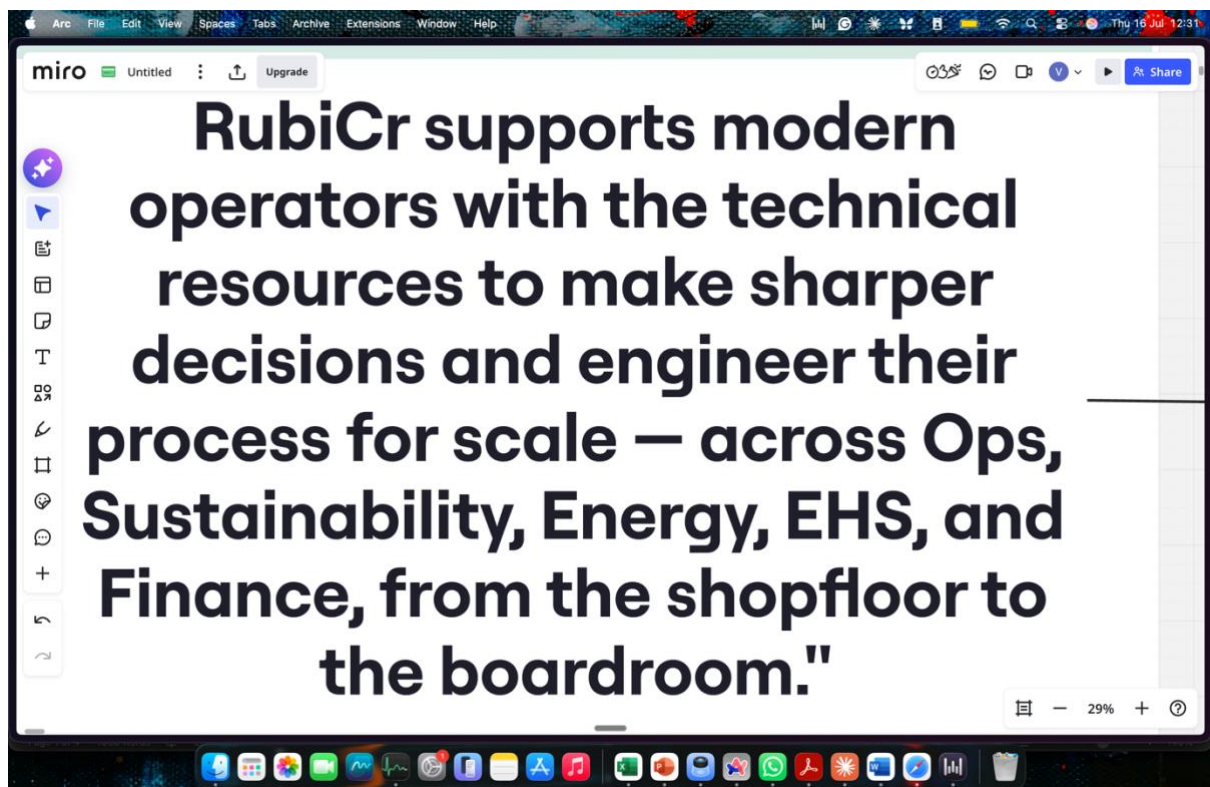

Scroll – 2

Just below the hero page, this is the scroll-to. The way I want this to work is that I want this text to zoom in and then come out. This is a very highlighted statement where we are supporting modern operators with the technical resources to make sharper decisions and engineer their process for scale. This will be the main message. Once somebody comes down from "What is the meaning of a process expert," this entire section should zoom out and then show them what the product does across these functions:

- operation
- sustainability
- energy
- health and safety
- finance
- etc.

and so on and so forth.

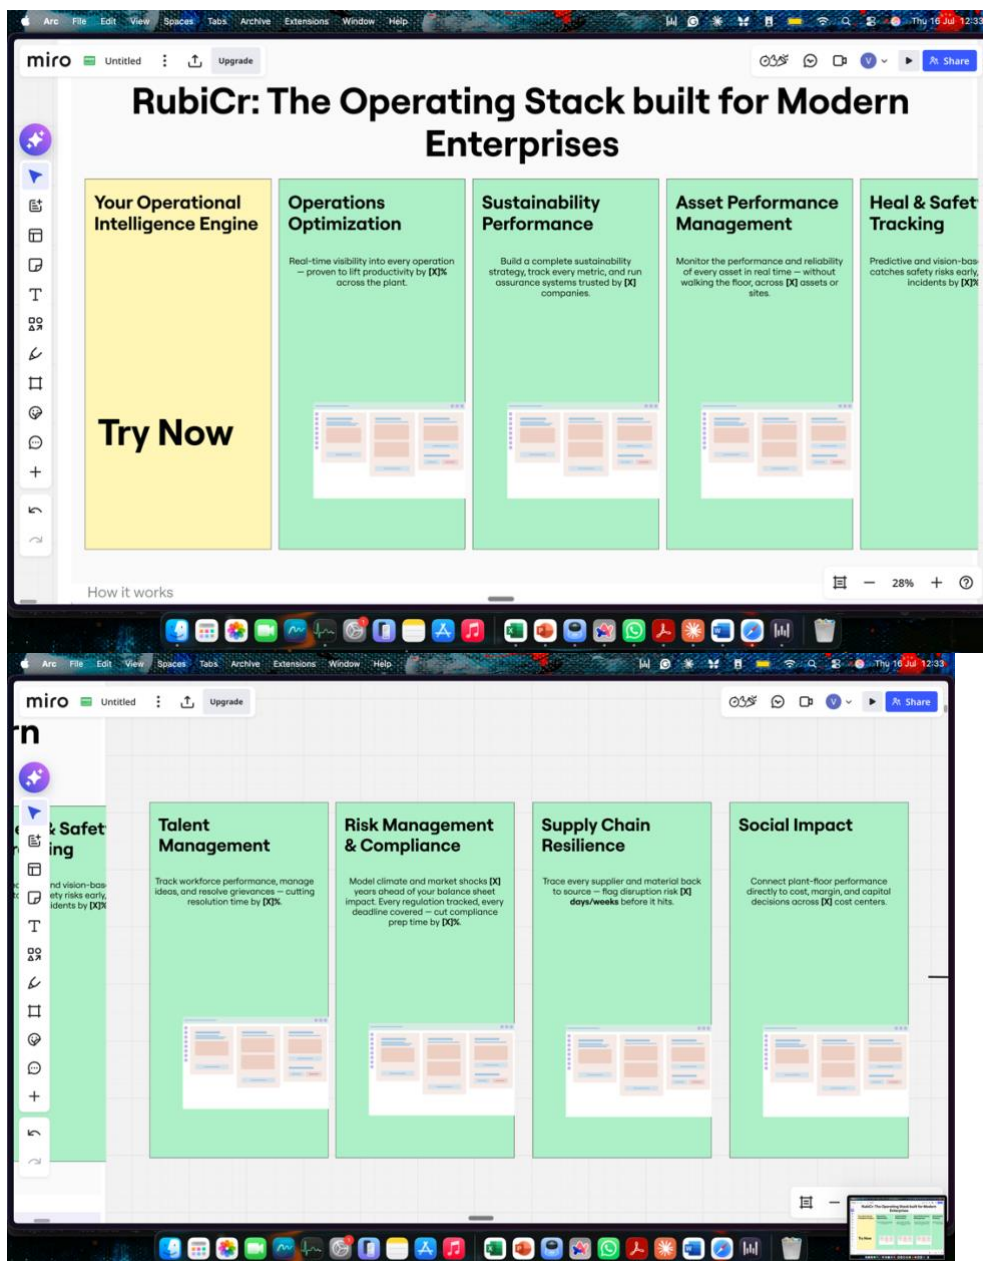

Scroll-3:

Now, the way the Scroll 3 will work is that this is where we introduce what this operating stack is and what these modules are. On the left, where there is Operational Intelligence Engine with the call-to-action button called Try Now, this will just have an image on it. On the right side, these are the individual modules. There are eight of them spread across these two images:

- Operations
- Sustainability
- Assets
- Health and Safety
- Talent Management
- Risk Management and Compliance
- Supply Chain Resilience
- Social Impact

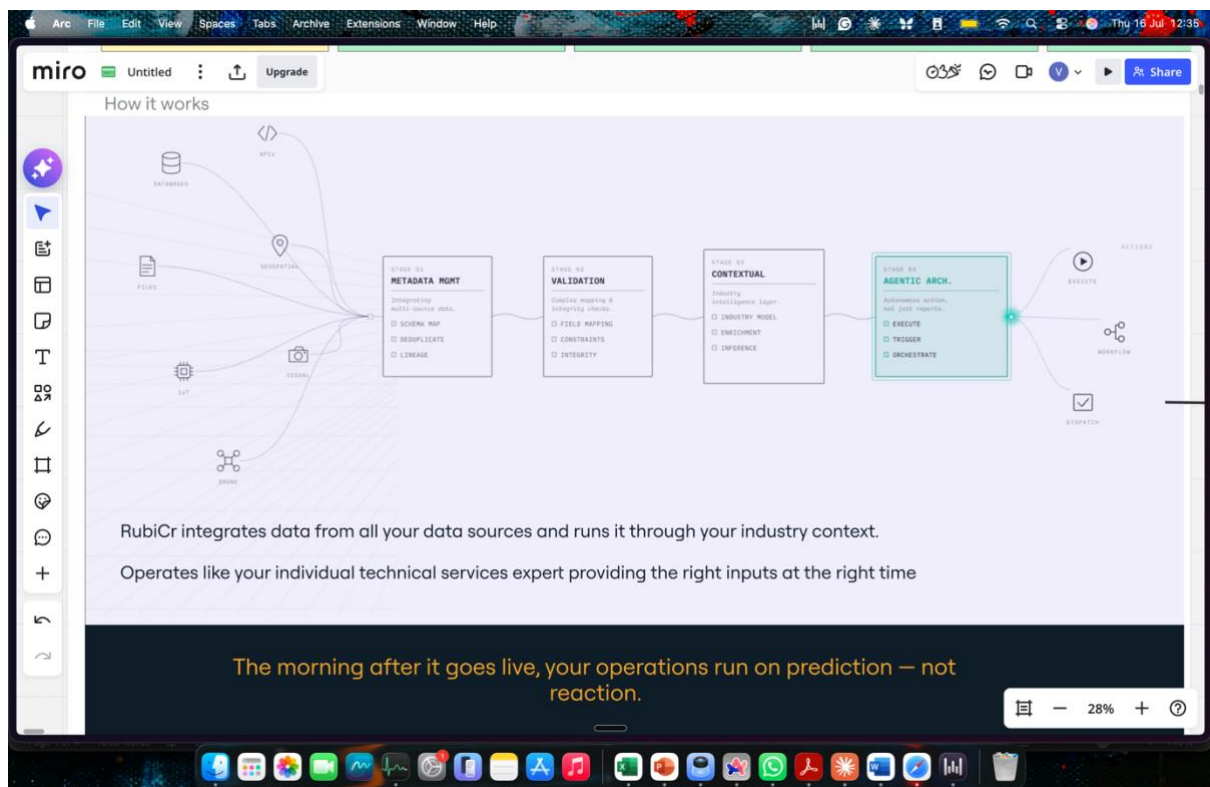

Each of these will have the title and the text, followed by a small graphical image. The graphical image, you can keep placeholders for now. These will all be horizontal, with an arrow button to enable the movement of transition between each of these. When somebody clicks it, they will be able to reroute to the page where these original modules are already located.

Scroll – 4

The next scroll, which is the scroll for, is basically a graphical image of how this platform works. This is already available with us in terms of the graphical interface as HTML code. Keep a placeholder for it right now.

What I want is the key message going on, saying it integrates data from all your data sources, runs through the industry context, and operates essentially like your individual technical services expert, providing you the right inputs at the right time. Focused on this, finally, the wrap-up for this particular scroll is: the morning after it goes live, your operations run on prediction and not reaction.

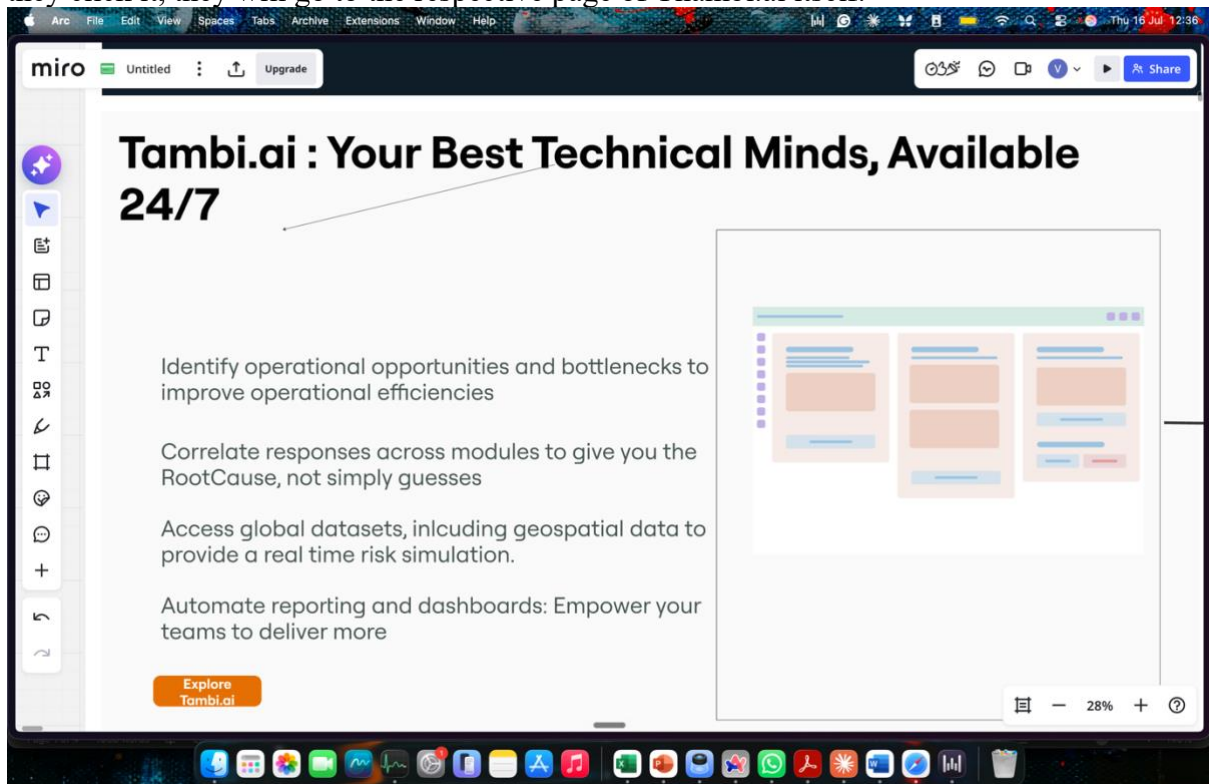

Scroll-5

The next scroll is where we introduce our AI agent, Thambi.ai. Thambi is basically your individual process expert. He is the most experienced person in your team and never stops working for you. He's available with you 24/7. I think that's the key message that we want to highlight. Now, the way we will be doing this is by showing each of these individual tasks. For example, there are four action items:

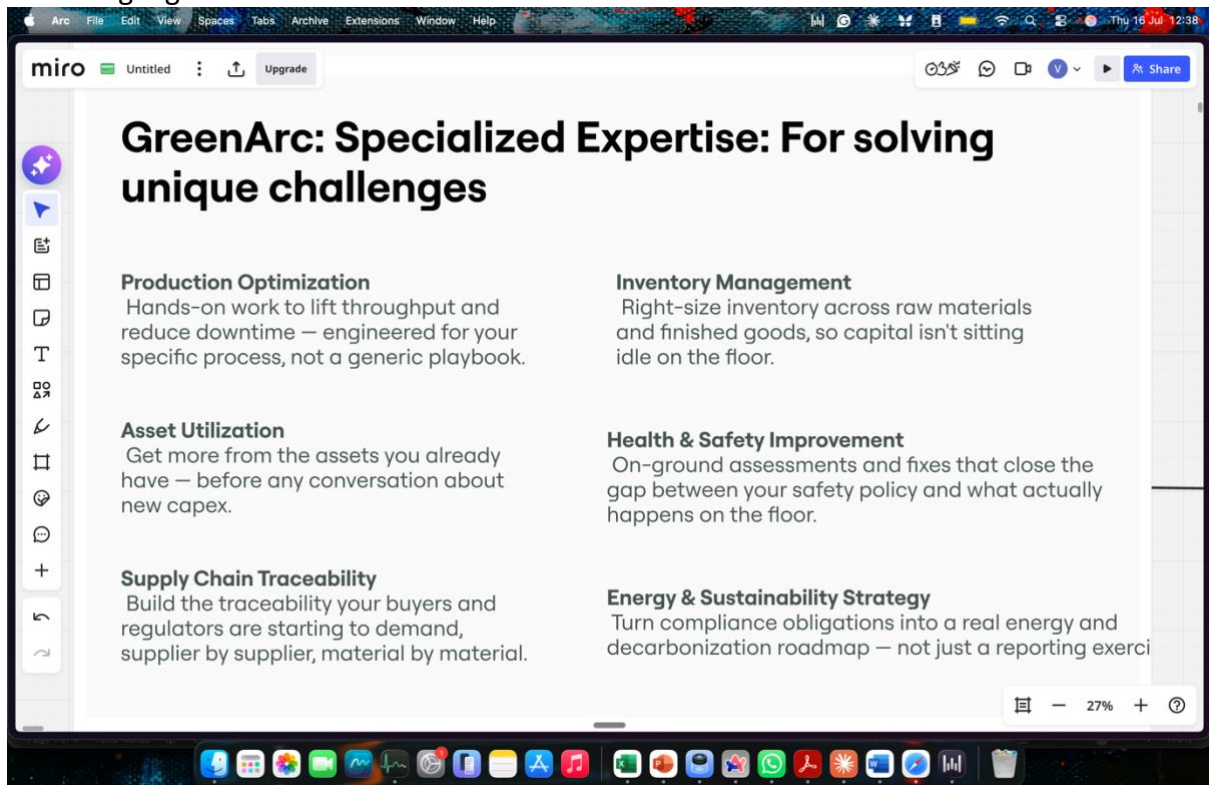

- Identifying opportunities
- Correlation of responses
- Accessing global data sets
- Automating reporting and dashboards

When a person clicks on this on the right side, the respective image will change. On the right side, if you see there is a chart, which is an image of a graph. What will happen is that every time somebody clicks on each of these, they will be able to see the different charts or different views of the product. Finally, there is a call to action called "Explore Thambi.ai". If they click it, they will go to the respective page of Thambi.ai itself.

Scroll -6

The next scroll is our consulting and services arm, which is called GreenARQ. These are basically specialized expertise to solve all those challenges which are far more deep and industry- and context-related. There are six sets of core challenges that we solve. I want you to recommend what is the best way of showcasing this, whether this is an image or it's just with a highlight on each of these items.

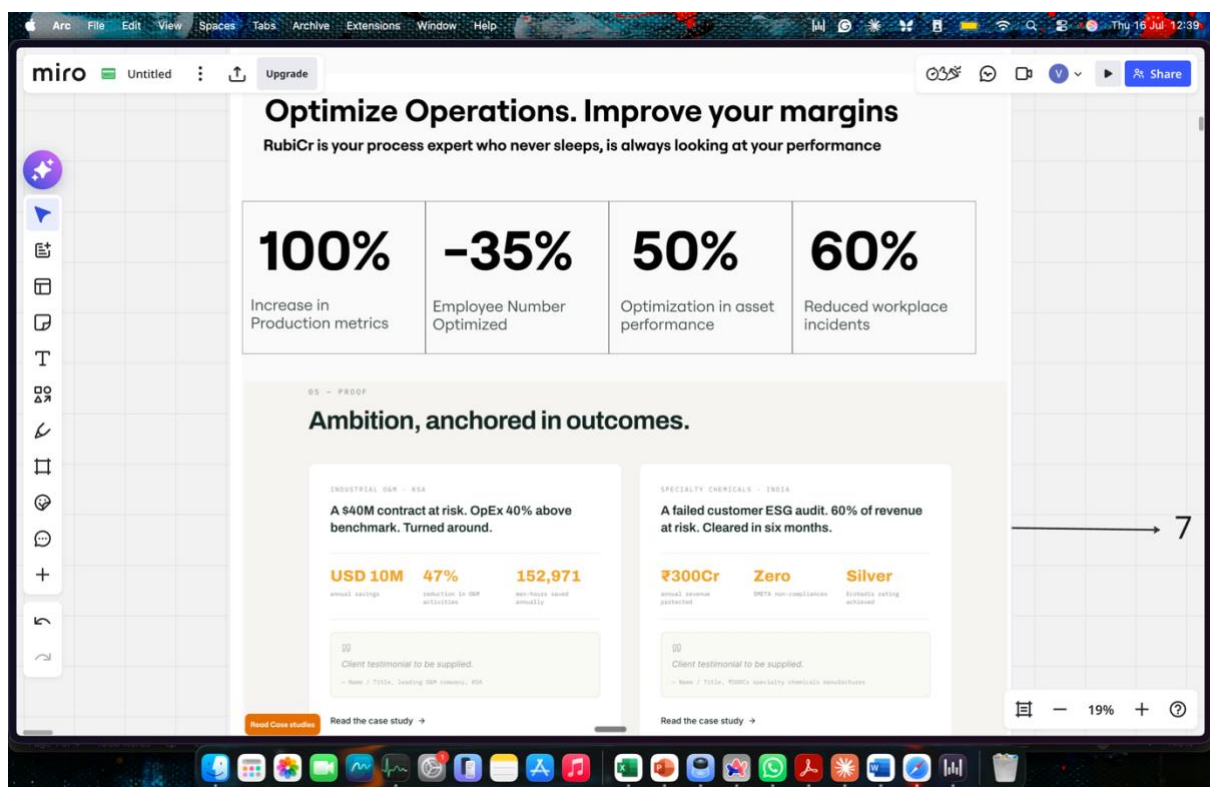

Scroll 7:

Scroll number seven is about the impact that we are creating, essentially around how we are able to optimize the operations. This will have a set of four KPIs. I want it to happen so that it looks dynamic, in the sense that it is rotating, and then you are able to see it spin up and arrive at these particular numbers. In addition to this, just below this, there are individual case studies. For example, at any given point in time, there will be four or five of these case studies. Each of these case studies, you need to follow the exact sequence, which means there is:

- a core line
- an impact metric
- the work that we have done
- a link to access the case studies

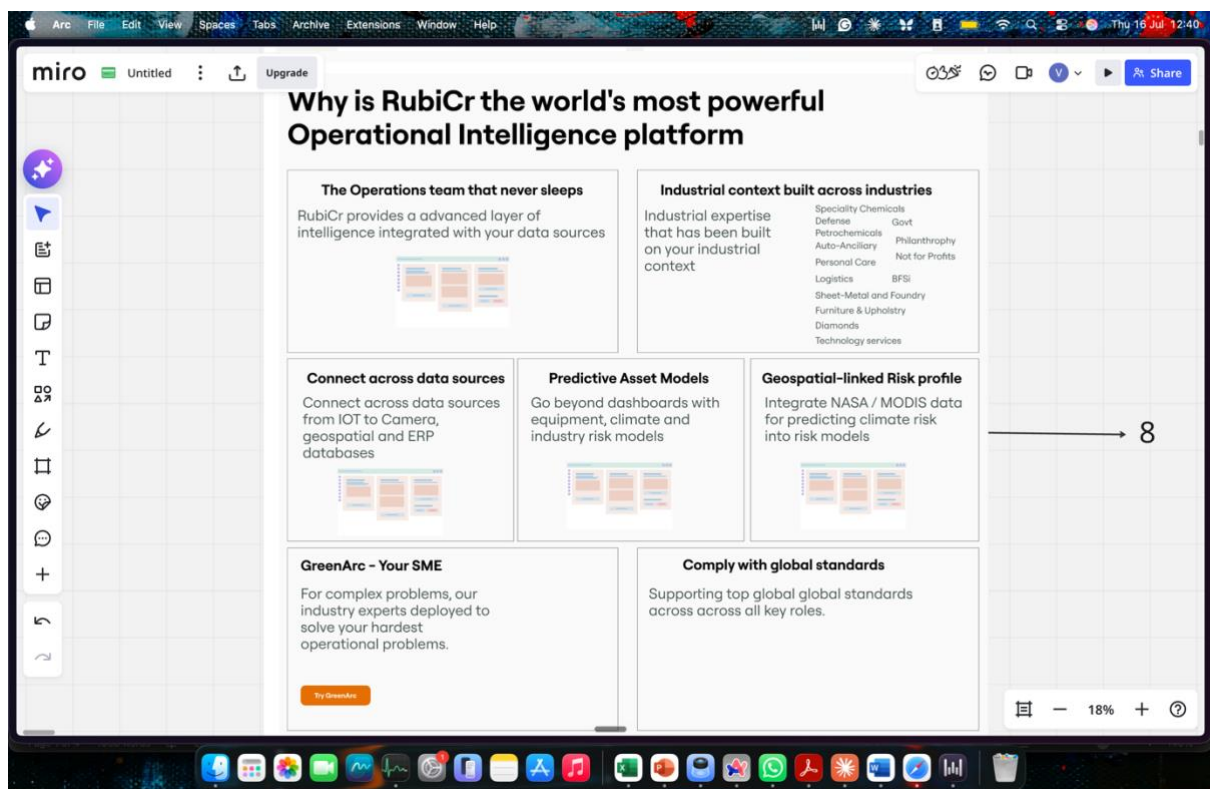

On the website, at any time, there will be two, and if you press a horizontal scroll, you will be able to horizontally shift and access many more of these case studies over there. If needed, also see how we are able to put images as background onto these case study cards themselves.

Scroll 8:

The next scroll is on why Rubiker is the most powerful operations intelligence platform.

- If you see over here, there is a set of seven cards. Each of these cards explains a particular benefit of how the platform operates. For example, let's look at card one. There is text: "The operations team that never sleeps." There is an explainer that provides an additional intelligence layer. Inside that card itself, there will be a graphic that will be placed, which will be designed by my team.
- Similarly, on the card to the right, where you see the industrial context built across industries, over there there's a statement on industrial expertise. Right next to it is a list of these industries. I want this list to keep moving as a running ticker, so it has to be a vertical ticker where the industries keep moving vertically in and out within the card itself.
- Similarly, for all the other cards, if you see there is text, there is an explainer, and there is a graphic video which will be put onto it. This graphic will be designed by the team, and they will be taking it and putting it over there. I want you to keep placeholders over there for the time being.
- Similarly, the last line item, which is "Complying with global standards," I want you to give a placeholder for a horizontal ticker inside the card itself for all the global standards that we can support.

Scroll 9 –

The final scroll is about what our customers are talking about us, so it'll have a series of testimonials available as horizontal scrolls and horizontal tickers, which is there now. It will have current placeholders, but you should allow me the ability to put, ideally, the title of the person, the logo of the company, and, along with it, any other testimonial which they've given for us. All of that has to be specifically in this particular section. The final bit, which is the call to action, is essentially how they are able to interact with us for a demo or they're able to get in touch with us for any other question which needs to be asked.
